

# Ajax/Json 설정

## 1. 라이브러리 추가

jackson 라이브러리 검색해서 추가(3개4개 정도 됨, 정확X)

## 2. 설정 추가

```
<bean class="org.springframework.web.servlet.mvc.method.annotation.RequestMappingAdapter"
    <property name="webBindingInitializer">
        <bean class="egovframework.com.cmm.web.EgovBindingInitializer"/>
    </property>
    <property name="messageConverters">
        <list>
            <bean class="org.springframework.http.converter.json.MappingJackson2HttpMessageConverter"/>
        </list>
    </property>
</bean>

<bean id="beanNameResolver" class="org.springframework.web.servlet.view.BeanNameResolver"/>
<bean id="jsonView" class="org.springframework.web.servlet.view.json.MappingJackson2JsonView"
    <property name="contentType" value="text/html; charset=UTF-8"/>
</bean>
```

## 3. 사용 예제

```
$.ajax({
    url: '${pageContext.request.contextPath}/admin/menu2/rejectEnrollment',
    type: 'GET',
```

```

        data: 'ceIndex=' + ceIndex,
        dataType: 'json',
        contentType: "application/json; charset=UTF-8",
        success: function(data){
            alert(data.createdAt);
            console.log(data);
            enrollDate.value = data.createdAt;
        },
        error: function(error){
            console.log(error);
        }
    })
}

```

```

@ResponseBody
@RequestMapping("/admin/menu2/rejectEnrollmentInfo.do")
public EgovMap rejectEnrollmentInfo(@RequestParam Integer ceIndex, ModelMap m) {
    System.out.println("hello" + ceIndex);

    return dbMemberAdminService.selectRejectEnrollmentInfo(ceIndex);
}

```
